DEVICE ENROLLMENT: THE NEXT LEVEL

SIMPLE ESIM MANAGEMENT

Compared to a physical SIM card, an eSIM offers many advantages: No cumbersome card insertion is required, there is almost no potential for misuse, and the eSIM can be quickly and easily adapted to the user's needs. However, distributing, managing, and activating the eSIM still poses a challenge.

Together with Deutsche Telekom, EBF has developed a solution that, in combination with a Unified Endpoint Management system, makes it possible to quickly and easily assign an eSIM to a mobile device, activate it, or deactivate it if necessary. No matter where the employee is physically located. To do this, the solution combines information from different systems – something no other solution on the market currently manages to do. This makes rolling out new devices, switching devices, or switching from a physical SIM card to an eSIM very easy.

Prerequisite

Prerequisites for using the eSIM Business Manager are eSIM-enabled devices and, in Germany, a framework agreement with Deutsche Telekom. International use is also possible for other carriers.

ESIM-ONBOARDING

Administrators can assign a phone number and eSIM to new devices and activate them with just a few clicks.

CONTRACT OVERVIEW

All relevant details of all active mobile phone contracts are clearly displayed in a list. Information from different systems (e.g. the UEM system and DEP portal) is combined.

ESIM-MIGRATION

Administrators can quickly and easily convert one or more physical SIM cards into an eSIM. Migration from one eSIM to another eSIM is also possible.

ADVANTAGES OF THE ESIM BUSINESS MANAGER

—

TIME SAVING

Administrators can assign or revoke an eSIM to/from devices quickly, easily and remotely – with little effort and without having to manually search for information in different systems.

COST REDUCTION

Telecommunications tariffs can be optimized. Unnecessary costs can be avoided by revoking an eSIM.

TRANSPARENCY

Administrators can quickly view contract-relevant details. This is achieved by automatically merging data from different systems.

USABILITY

Users are automatically notified of the available eSIM on the device and can activate it with a few clicks. They can then use their mobile phone contract immediately.

YOUR DIGITAL WORKPLACE ADVISOR

—

EBF is your ideal specialist partner for the workplace of the future. We work with our customers and partners to design solutions for complex enterprise mobility challenges and develop customized digital workplace concepts. Our products, services, and solutions make digital, mobile, and flexible working a reality, increasing employee and company productivity while maintaining the highest security standards, with a manageable IT workload, and leading to positive user experiences. We can help you make your company a truly digital workplace.
