

YOUR BUSINESS CONTACTS AT THE REACH OF YOUR HAND

Global Address List (GAL) on iOS,
iPadOS and Android devices

EBF CONTACTS IS MORE THAN JUST A MOBILE ADDRESS BOOK

All of your business contacts are always up to date and in one place on your mobile device – with EBF Contacts. The app is much more than just an address book on iOS, iPadOS and Android devices that regularly synchronizes with systems such as the Global Address List or your CRM system. Features like automated caller identification improve availability, productivity, and communication among your employees – offering you a distinct added value in an era of hybrid and mobile work.

SYNCHRONIZE CONTACT DATA – WHICH DATA SOURCES CAN BE CONNECTED?

Interfaces to common applications

Exchange O365, On-Premise, and the HubSpot CRM system can be connected to EBF Contacts quickly and easily via an API. The data from these sources is automatically synchronized on a regular basis.

Easy connection to additional sources

The connection of all other data sources such as Salesforce, Active Directory or other is also possible. For this the data must be exported in CSV or JSON format and must be provided as a ZIP archive. Powershell scripts can be used to automatically keep the data up to date.

EBF CONTACTS PRODUCT FEATURES

Caller ID

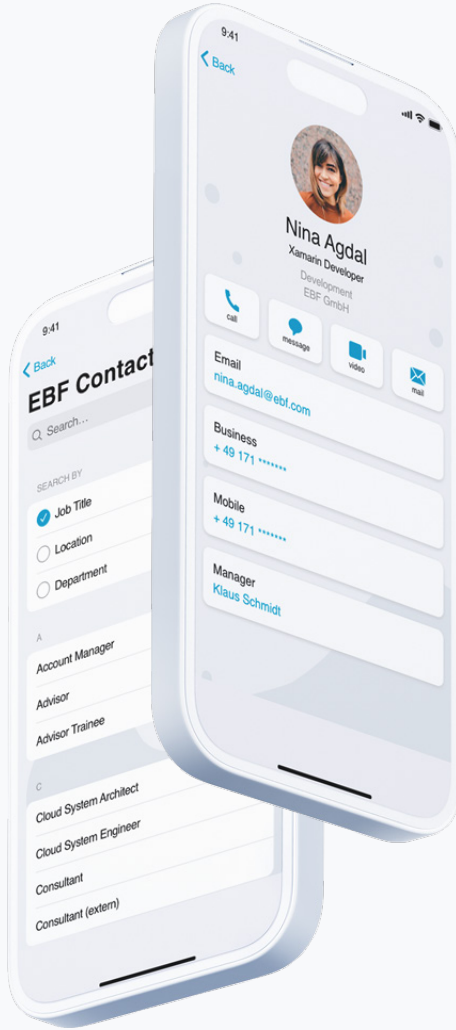

For incoming calls from professional contacts, the names of the callers and their companies are automatically recognized by EBF Contacts and displayed on the screen – without having to save them first.

Secure protection for sensitive contact data

EBF Contacts securely stores company and customer contacts on smartphones using encryption and in compliance with GDPR.

App users can conveniently authenticate themselves using a password, Face ID, or Touch ID.

Displaying contact data

All professional contacts can be displayed with details such as name, profile picture, telephone number, e-mail address and position. Your employees can call their contacts via Teams or by phone from this view, or they can send a text message or e-mail.

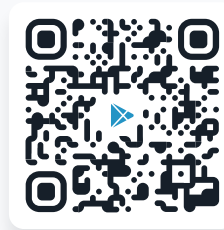

Searching for contacts

Colleagues can be found by name, company name, e-mail address, or telephone number. For internal contacts, the line manager is also displayed in the contact details – a good hint if the desired contact is not available.
